- Liver** : The liver is normal in size. Hepatic parenchyma shows brighter echopattern with poor visualization of posterior parenchyma. No definite focal lesion is detected. Portal vein is normal in calibre.
- Gall Bladder** : The gall bladder is normal in size. Wall thickness is within normal limit. No definite intraluminal abnormality is detected.
- Biliary tree** : CD & intrahepatic biliary channels are not dilated.
- Pancreas** : Visualized part of the pancreas appears normal.
- Spleen** : The spleen is normal in size with uniform echotexture.
- Kidneys** : Both kidneys are normal in size, shape and position. Bipolar measurement of right kidney is about 95 mm and that of the left is 96 mm. Parenchymal thickness of RK is about 18 mm and that of LK is about 19 mm. Cortico-sinus differentiation is maintained. Pelvicalyceal systems of both kidneys are not dilated. Parenchymal thickness and echogenicity appear normal. No calculus or SOL is detected.
- Urinary bladder** : The urinary bladder is partially filled. However no intra vesical lesion is seen.
- Prostate** : The prostate is normal in size (31mm x 34mm x 31mm, vol- 17cc). Prostatic parenchymal echotexture is unremarkable. Capsule appears intact.
- Interpretation** : Fatty change in the liver (Grade II).
